

ActiveMap for cleaning: Digital cleanliness control

A multifunctional IT platform
for field staff management.

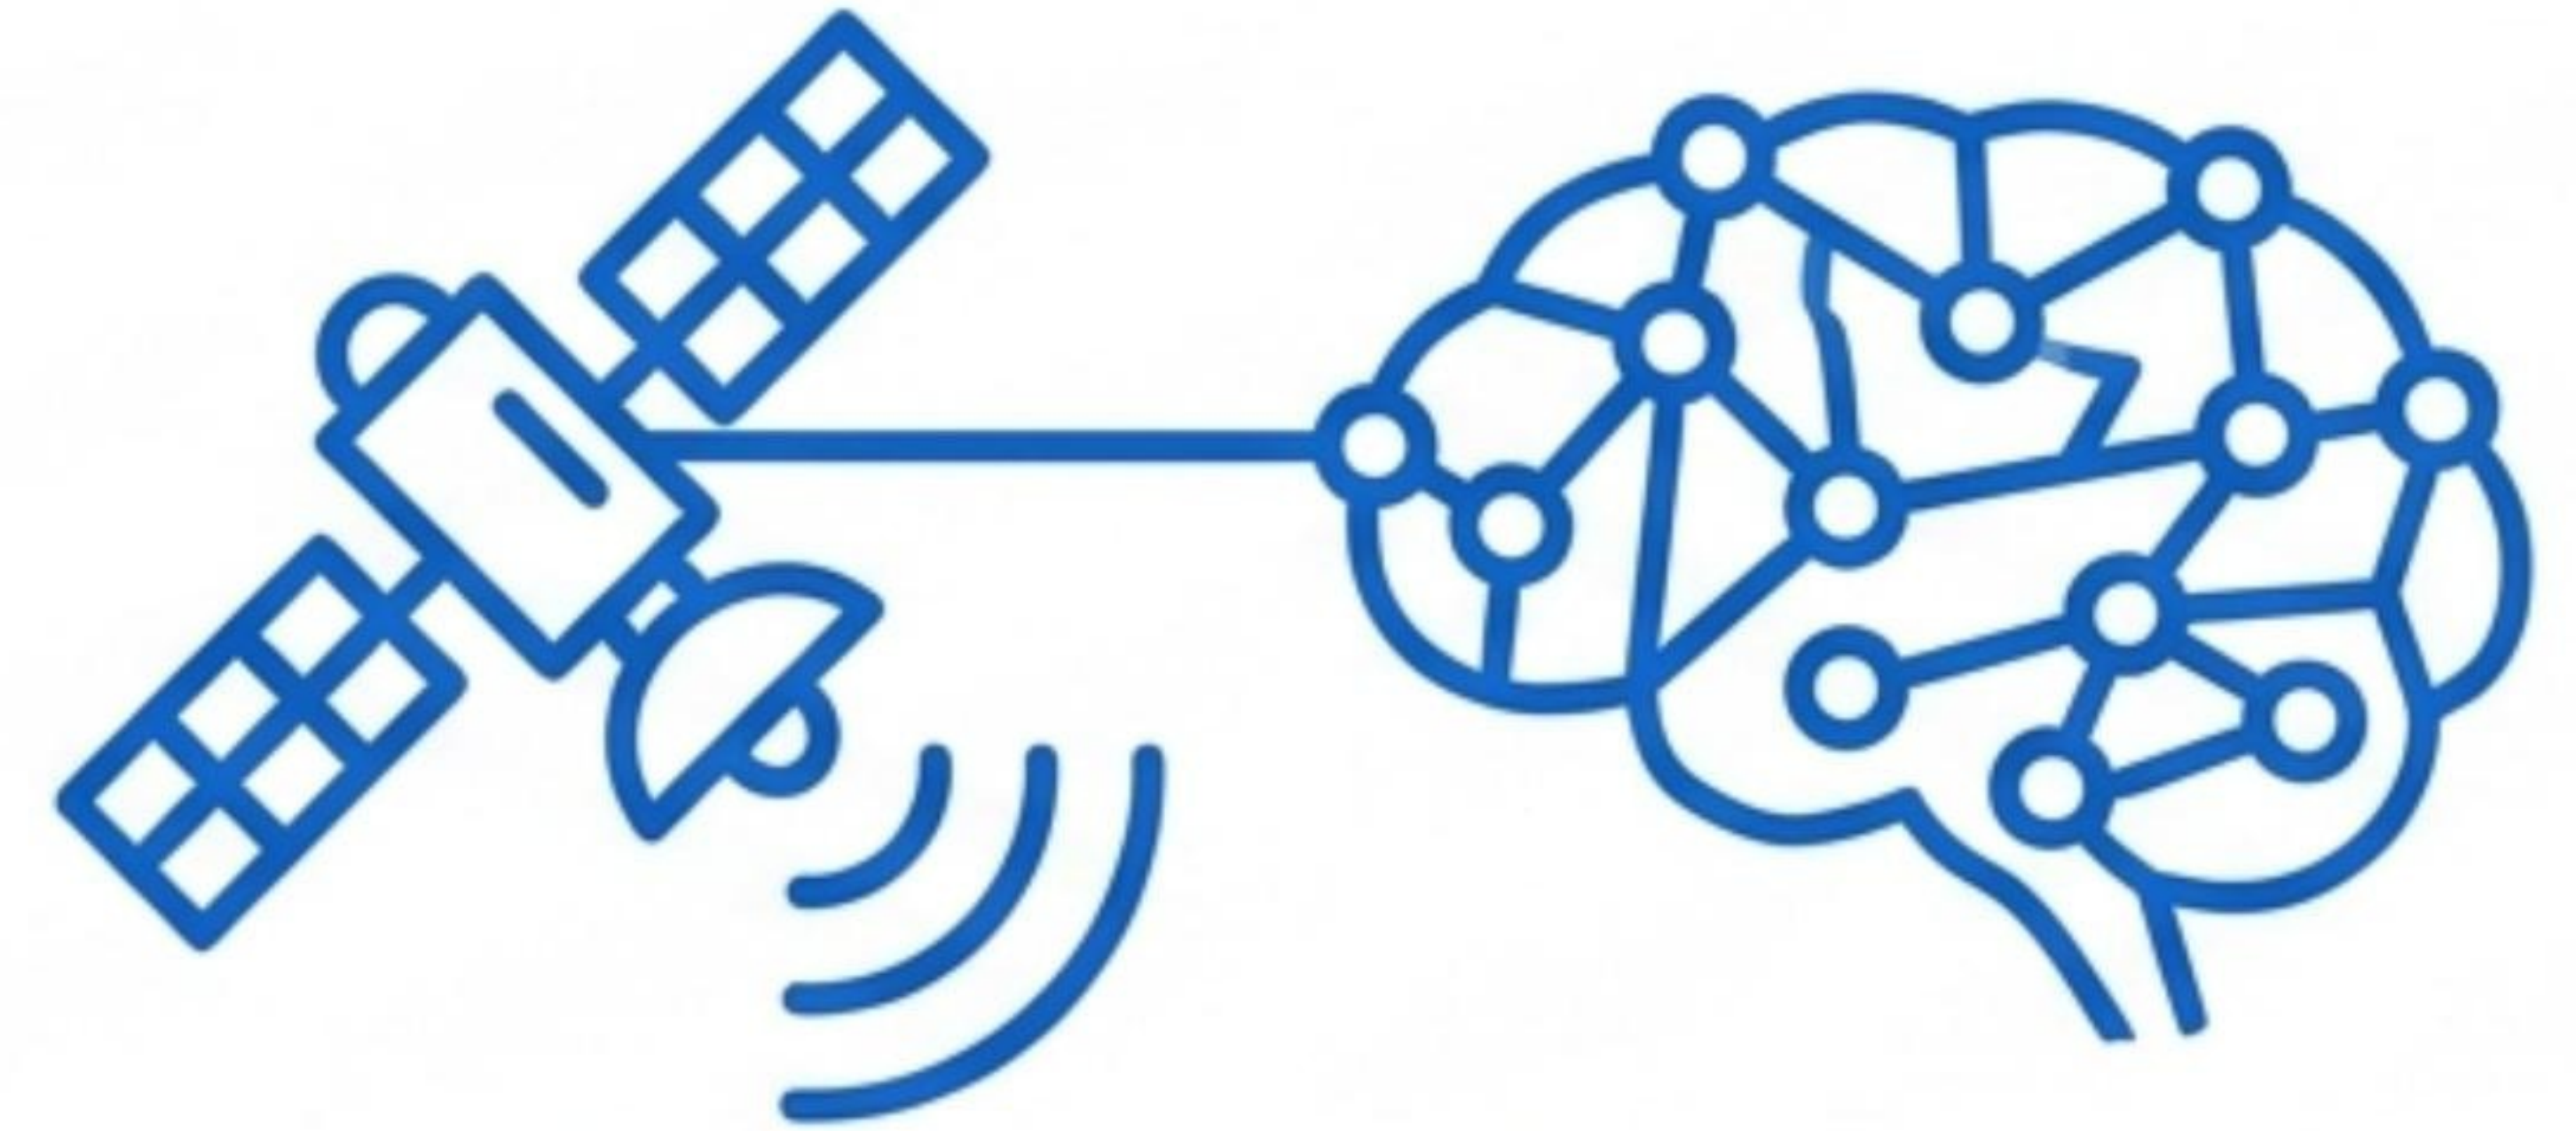

Automated quality control of cleaning
at geographically distributed facilities
using AI and geo-tracking.

Transitioning operations from blind trust to complete manageability

Trust-based execution and fragmented communication.

100% Manageability

Replacing human subjectivity with hard data through AI verification and real-time geo-tracking.

100% Reliability: absolute verification of task completion

Strict geo-control

Automatic reading of GPS coordinates and BLE beacons. Guarantees staff is exactly on site.

Mandatory "Live" photo recording

Complete ban on uploading photos from the phone gallery. Total elimination of fictitious work.

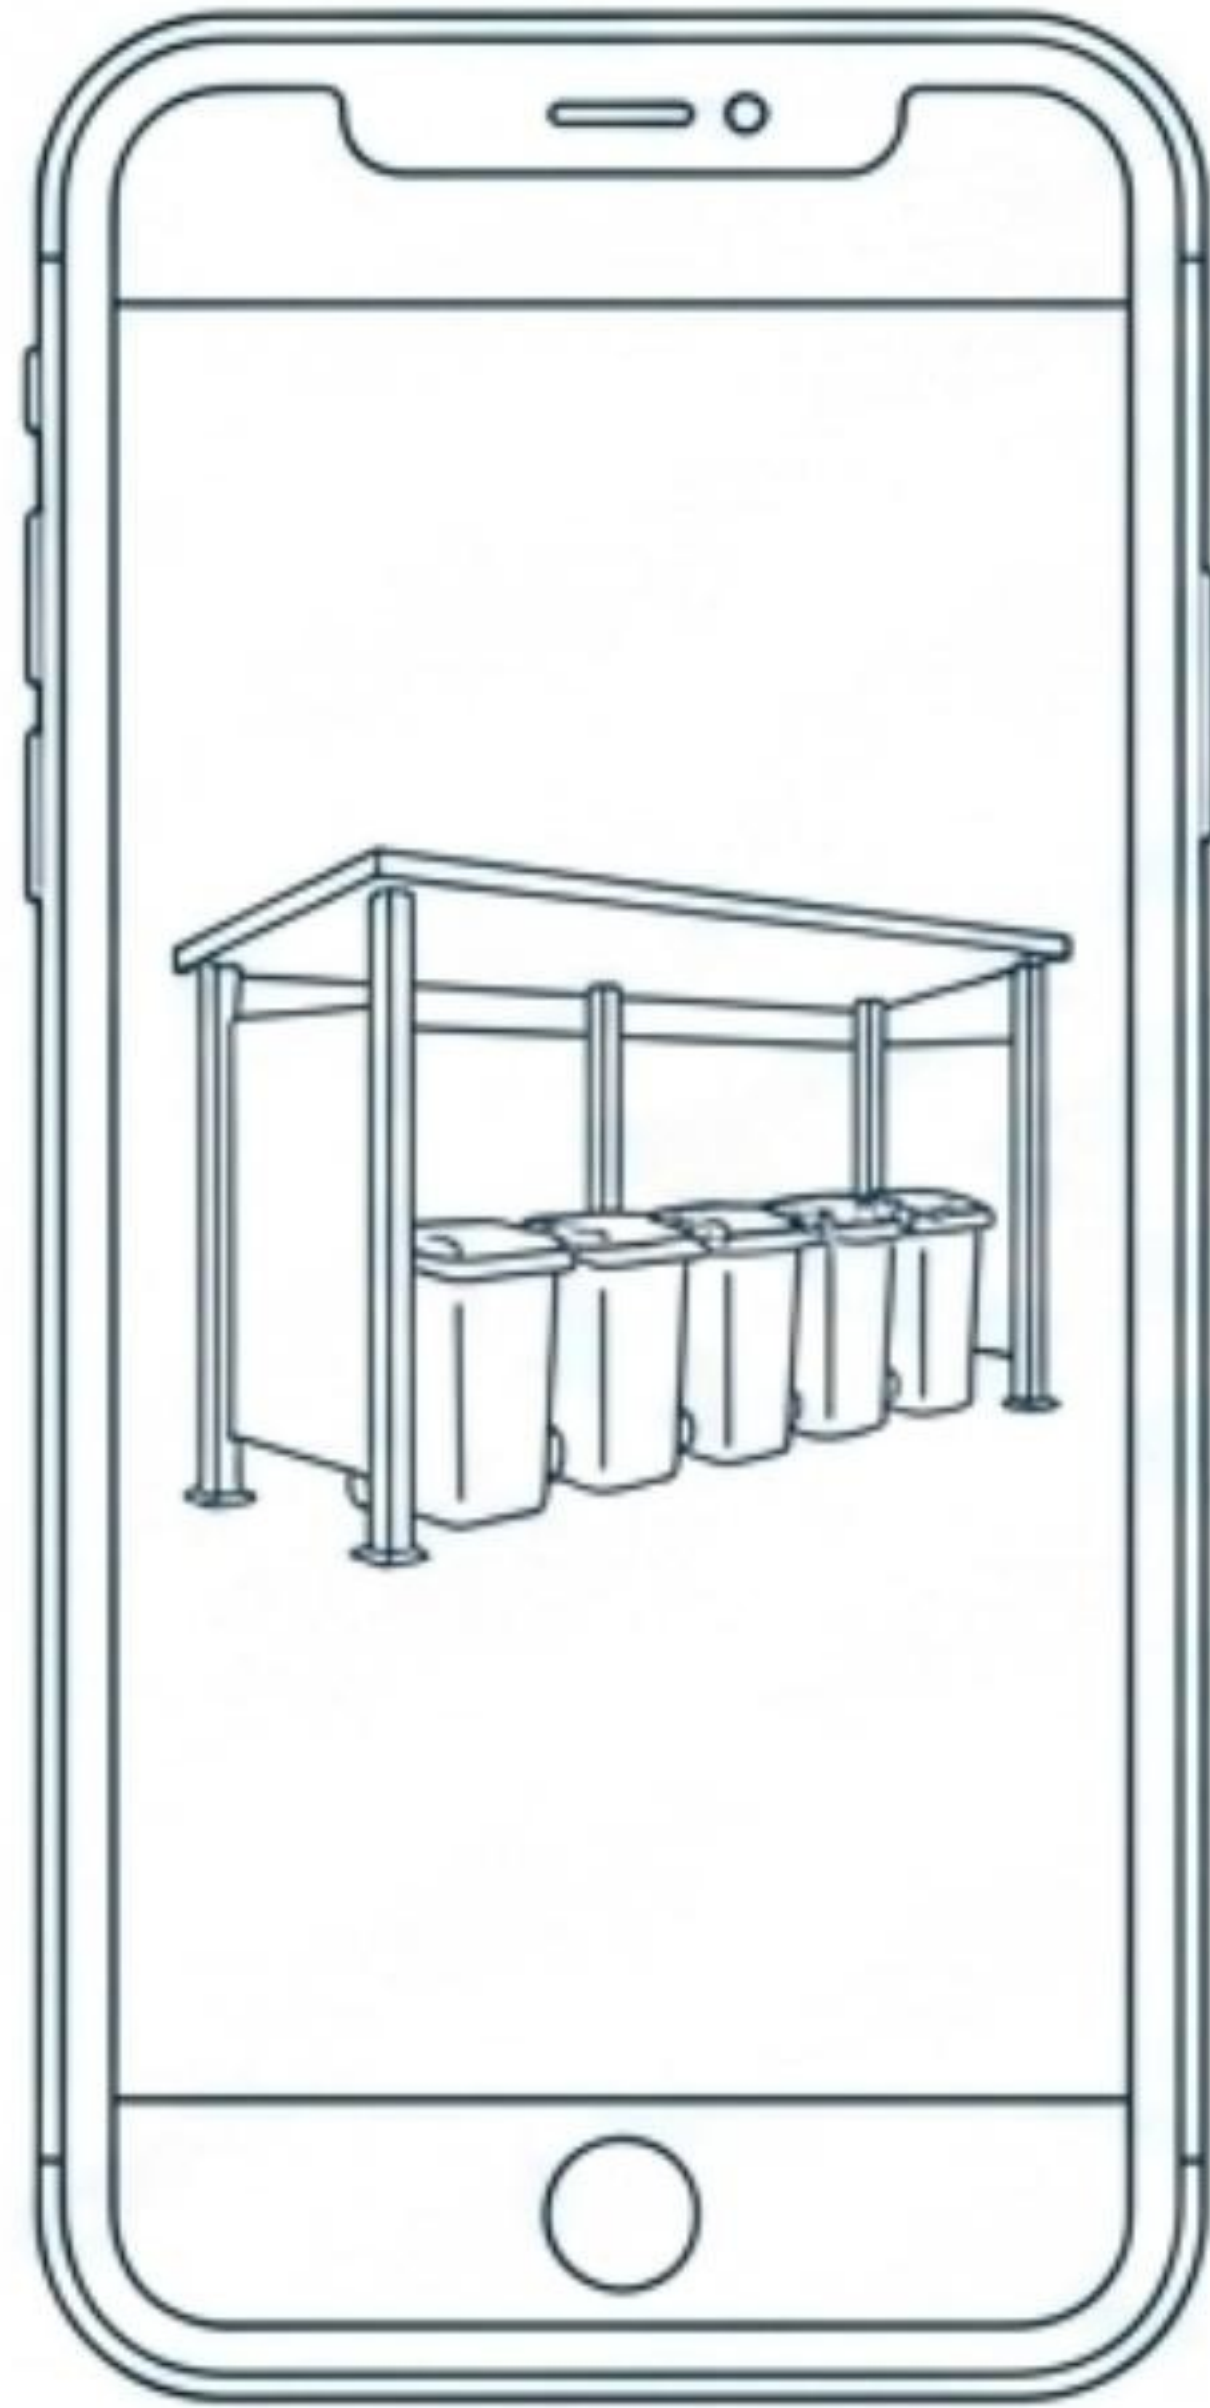

Digital footprint

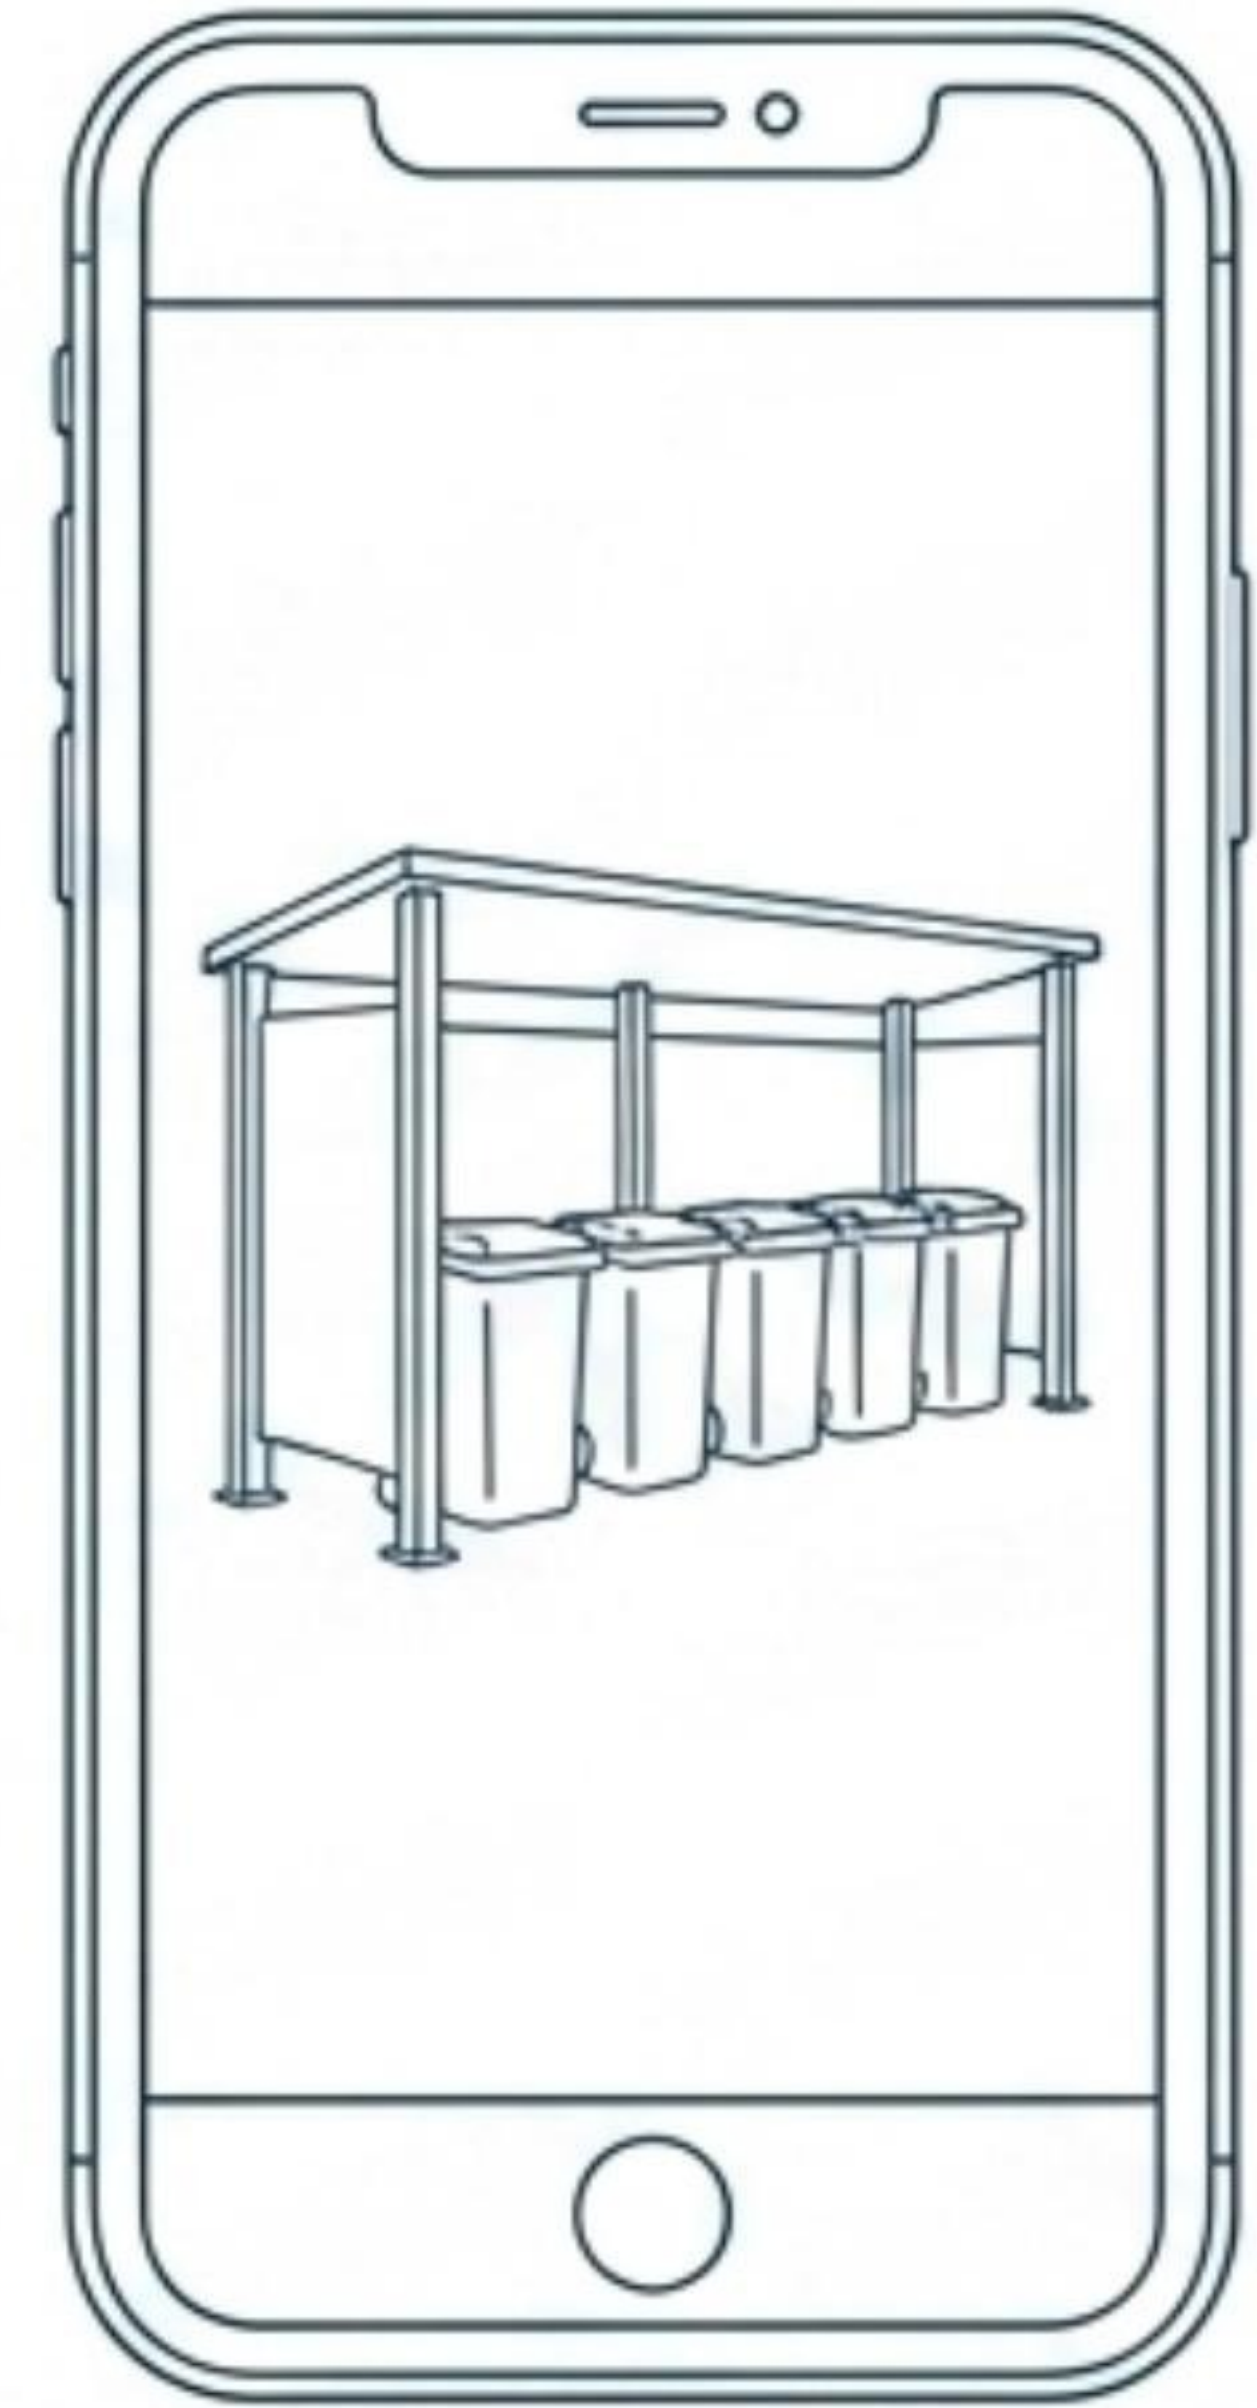

Immutable, tamper-proof recording of exact work start and end times.

Neural network quality control entirely eliminates human subjectivity

Reference photo
(Angle)

Actual result

96%

Match level

The service automatically compares the actual result with the **reference frame**, guaranteeing an ideal outcome before a human inspector ever arrives.

A simple and continuous management cycle

01 > 02 > 03 > 04

Task assignment

The dispatcher assigns a task to a specific service object.

Execution

The employee performs the work with automated geo-tracking and photo recording in MapMobile.

AI Verification

The neural network instantly evaluates quality against the reference photo.

Transparent report

The customer automatically receives absolute confirmation of standard compliance.

Delivering undeniable and measurable business outcomes

1

IT platform replaces scattered chats, calls, and paper logs.

0

Fictitious reports and misuse of working time.

100x

Payroll optimization: one dispatcher seamlessly controls dozens of facilities.

100%

Transparency for the customer. Automatic reports confirm strict SLA compliance.
