

Where is the courier and was it delivered? Transparent logistics with ActiveMap.

Transition from manual
management to 100% digital
control of your courier fleet.

The Hidden Costs of Traditional Delivery

When your staff grows, managing “the old way” costs real money. Manual control guarantees **lost time** and missing cargo.

10+

Couriers — the absolute management limit using WhatsApp and phone calls.

100+

Delivery points — triggering a high risk of lost addresses, route errors, and paper waybill confusion.

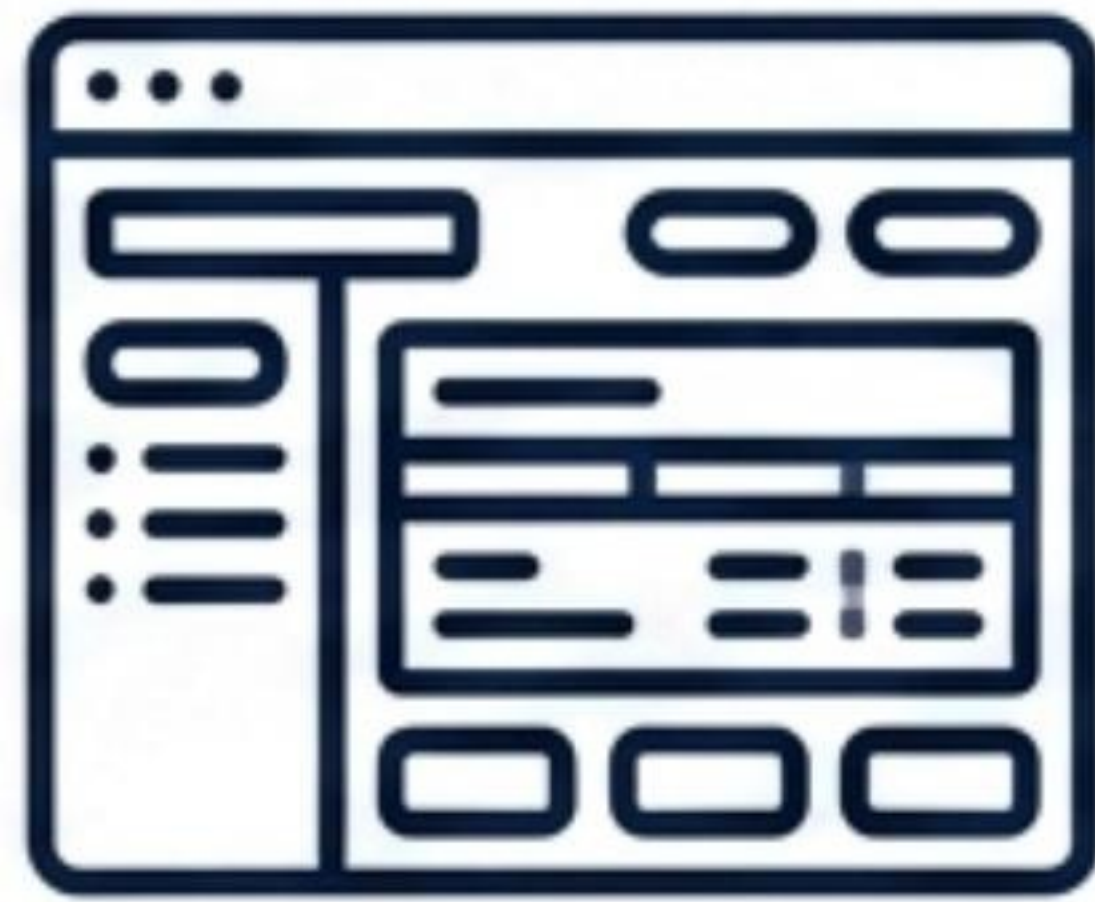

0%

Transparency — the inability to quickly prove arrival times or closed doors to your clients.

ActiveMap: The Single Digital Delivery Hub

Step 1: Office (Dispatcher)

Every morning, the dispatcher loads the route sheet into the system (addresses, sequence, and cargo).

Step 2: Cloud & Offline Sync

Data is instantly pushed to devices. If the network drops, the app saves progress locally and auto-syncs when connection returns.

Step 3: Field (Courier)

The courier sees clear, prioritized tasks in the app. Zero phone calls asking "where should I go?".

Strict Control Without Micromanagement

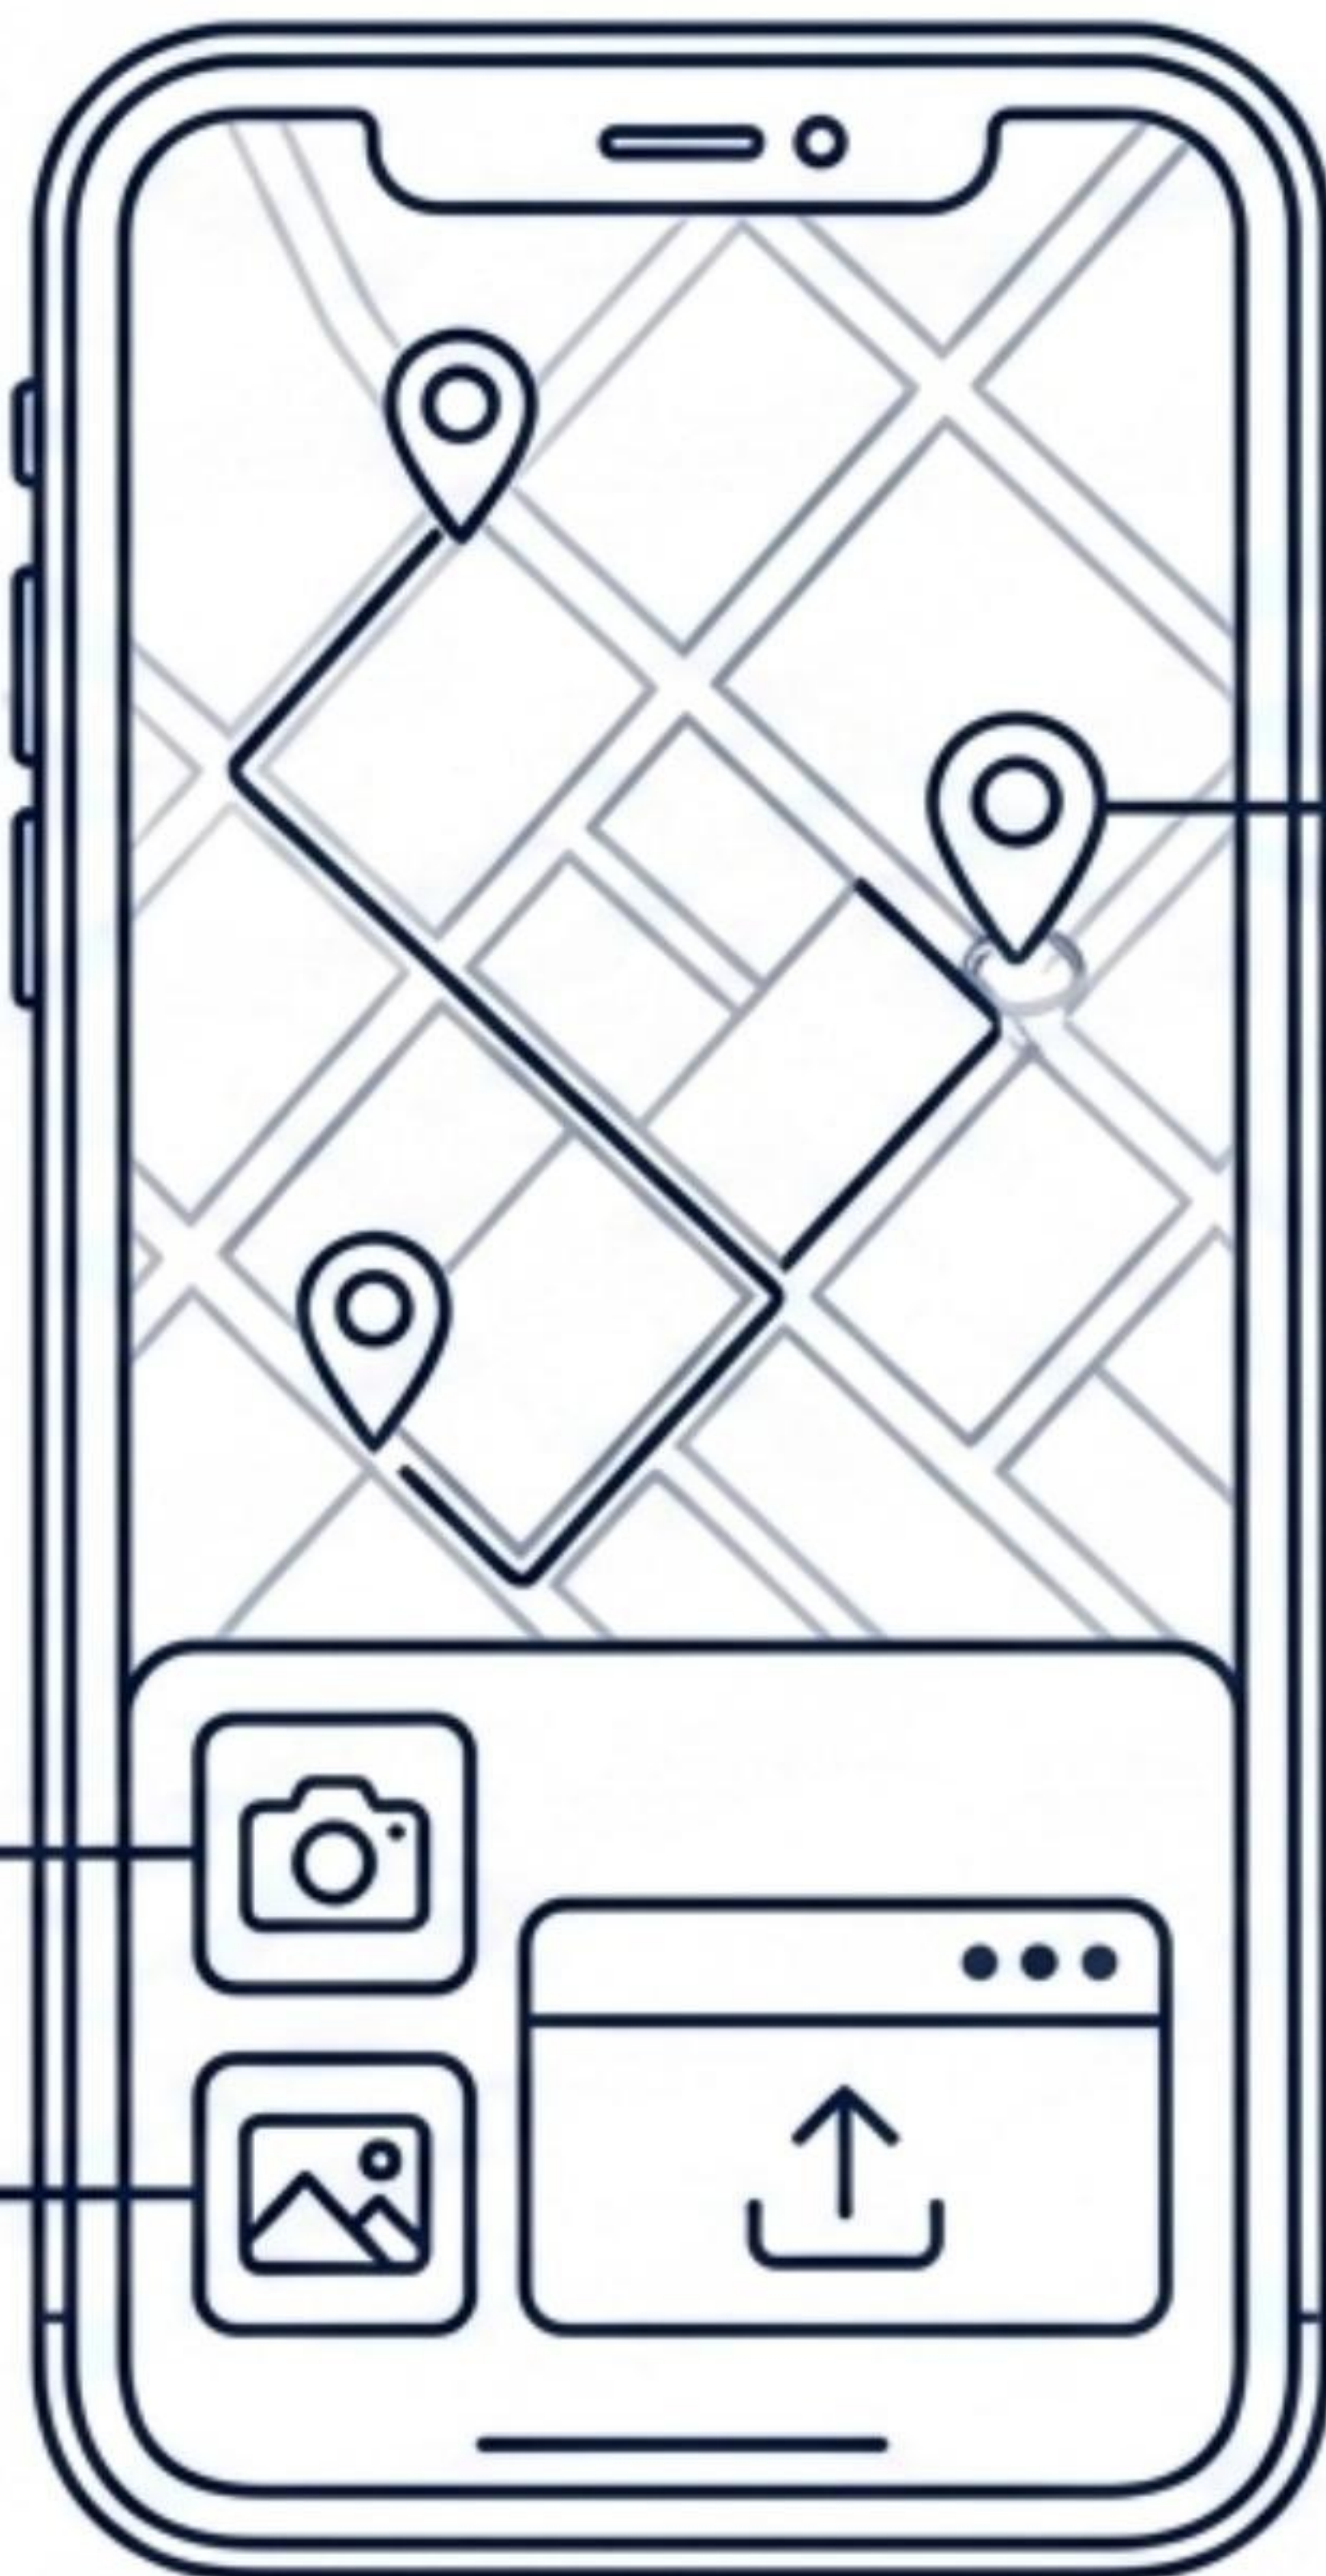

Geotagged Photo Reports

The courier photographs the cargo on-site. This serves as undeniable proof of delivery for the customer.

Anti-Spoofing Protection

Photos can only be taken directly through the app's camera. It is impossible to upload an old photo from the gallery.

Real-Time Statuses

Delayed? Point closed? Recipient missing? The courier logs it, and the dispatcher sees the failure instantly on the dashboard.

Implementation Effect: 100% Transparency

Before Implementation

Morning chaos, dozens of unnecessary calls to the dispatcher, endless paperwork, and unresolvable disputes with clients over non-delivery.

The ActiveMap Effect

- ✓ **Couriers stop calling dispatch.** All required information is already in their pocket.
- ✓ **Delivery points are never lost.** The app strictly guides the route with mandatory digital confirmation at each stop.
- ✓ **Instant operational analytics.** By evening, the office has exact data on who performed, cargo volumes, and where delays occurred.

Take your field service to a new level — scale your business without the chaos.
