

Digitalizing Telecom Field Services

How the **ActiveMap** system transitions field team management to a new standard of efficiency and **verifiable** control.

From Messenger Chaos to Absolute Control

The Outdated Approach (Messengers)

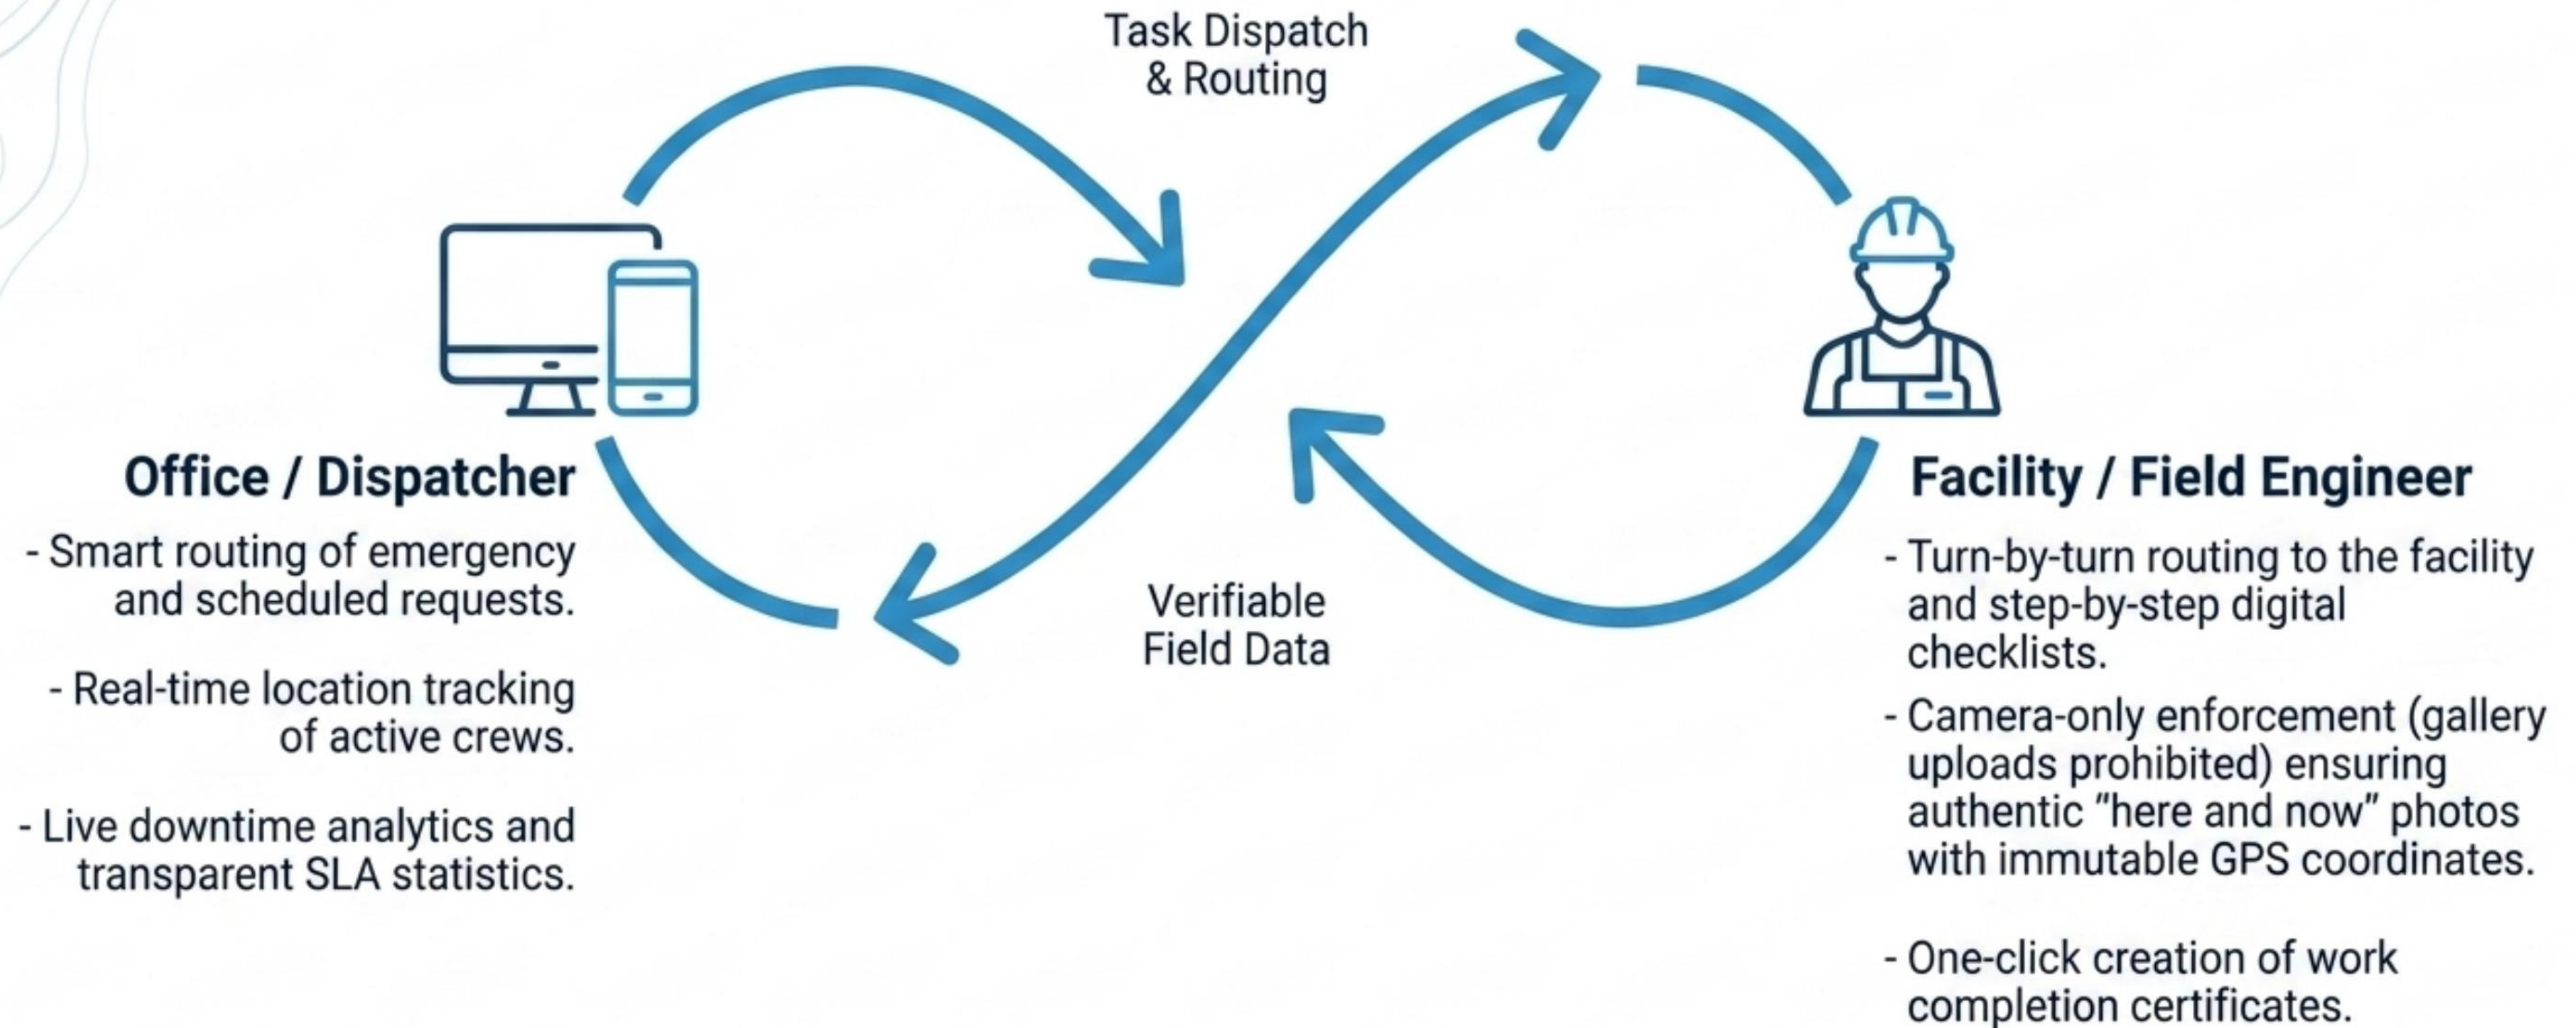

- Data loss in endless, unstructured chat threads.
- Unverified photos without time or location guarantees.
- Blind task distribution without real-time geolocation visibility.
- Delayed manual paperwork and material write-offs back at the office.

The ActiveMap Platform

- ✓ Unified digital database with comprehensive facility history.
- ✓ Strict electronic checklists with geotagged photos (gallery uploads blocked).
- ✓ Instant ticket assignment to the nearest available engineer.
- ✓ Automated generation of completion certificates directly on-site.

The Real-Time Ecosystem: Dispatcher ⇔ Engineer

Core Infrastructure Scenarios

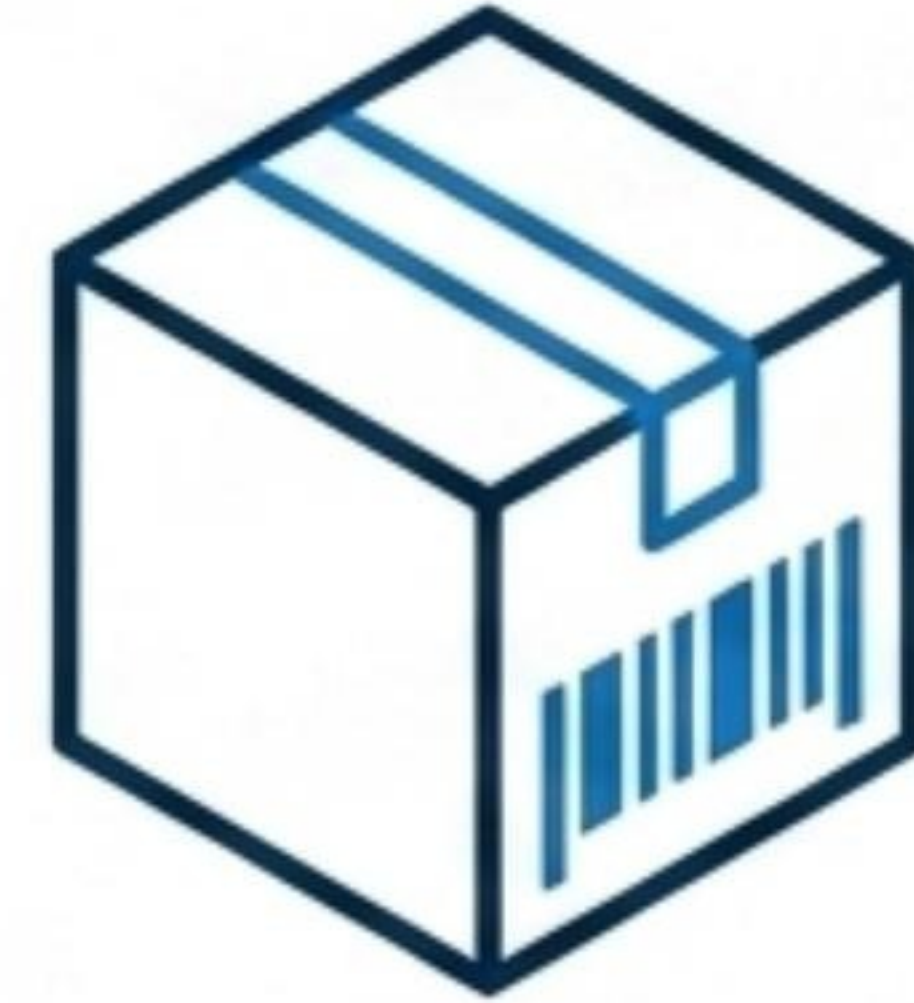

Emergency Response

Instant mapping of the nearest available engineer. Radically reduces response times to disconnects, outages, and cell tower emergencies.

Scheduled Maintenance

Maintains a detailed digital “biography” of every antenna mast structure. Automatically generates scheduled regulatory tasks tied to mandatory electronic checklists.

Inventory & Accounting

Logs consumed materials instantly on-site. Ensures highly accurate maintenance cost calculations, transparent warehouse tracking, and robust theft protection.

Proven Impact on Business and SLAs

100%

Minimum

Unified

Report Reliability

Employee fraud is mathematically eliminated through built-in photo fixation, mandatory geo-fencing, and immutable timestamps.

Equipment Downtime

Achieved via intelligent dispatching and instant, proximity-based task routing during critical emergencies.

Database Architecture

A single source of truth for all Antenna Mast Structures (AMS), enabling rapid, data-driven management decisions based on complete operational history.

Elevates labor discipline for both in-house crews and contractors, provides transparent operational cost mapping, and guarantees absolute communication service quality.
